

Our First Newsletter!

We would like to welcome you to our first monthly newsletter. Our goal is to bring you great information and fun!

New Weekly Arrivals!

We carry the best and newest curated selection of cannabis flower, pre-rolls, vapes, edibles and CBD products. Visit our website, or in store for details.

THE RELATIONSHIP BETWEEN TERPENES AND CANNABIS

Terpenes, or isoprenoids as they are commonly called, provide cannabis with its unique bouquet. Anyone who has been around a cannabis plant knows that nothing else in nature has quite the same scent as cannabis. The terpenes that give cannabis its unique flavoring and scent consists of repeating units of a compound called isoprene. Although less research has been put towards the study of terpenes in cannabis as opposed to the major cannabinoids found in the plant, terpenes are responsible for many of the physiological and psychoactive effects that cannabis is known for. Below, we have listed some of the major terpenes that are found in cannabis.

Limonene: In Sativa cannabis strains, limonene is a major terpene responsible for both flavor and effects. Found in other sources, such as citrus

fruits.

A-Pinene: Largely responsible for the odor associated with cannabis strains, a-pinene is also found naturally in pine trees, turpentine, and other coniferous plants. The most abundant of all terpene varieties.

Linalool: One of the more interesting terpenes found in cannabis, linalool is noted for its floral scent that is similar to spring flowers, but with spicy notes on the front end. Linalool has become an extremely popular terpene due to its soothing properties and its ability to act as an effective way to unwind. This terpene has also been shown to have discomfort relieving properties.

Myrcene: The most prevalent of all terpenes, myrcene is found in a wide variety of cannabis strains. In fact, the concentration of myrcene

in a cannabis plant determines whether that strain is considered an Indica or Sativa, greatly affecting the effects that the strain has. Cannabis strains that contain a myrcene concentration of 0.5 percent or less produce an energizing effect, while strains containing over 0.5 percent produce a more sedative effect. In addition to being a major terpene in cannabis plants, myrcene is found in hops, lemongrass, citrus fruits, and thyme, making this terpene one of the most popular in uses related to aromatherapy.

Terpinolene: Terpinolene produces a soothing effect on the user. In addition to this result, this terpene has been shown to exhibit potential life uplifting and discomfort reducing effects, leading some to believe that this terpene could become a valuable tool in the near future. **Geraniol:** A terpene that is also found in geraniums, geraniol gives off a rosy scent that has made it an extremely popular extract to use in perfumes. In addition to smelling nice, geraniol has been shown to repel mosquitoes.

Join us again next time as we continue to cover some of the most abundant terpenes found in cannabis plants and the ways that these terpenes can be used by the general public.

Are you a Lodge Rewards Member?

The Lodge is a community of buds and cannabis lovers all looking for something to make life better. Join our Lodge to start receiving Reward Points to unlock special discounts and free swag just for you! Plus, you'll get first dibs on great deals, exciting events, free giveaways and new products!

The shop is led by a stellar roster of Educators who go above and beyond to educate their customers!

You will find the same great service, prices and selections at our other stores in **Toronto and North York!**

JUST ARRIVED!

HONEYDEW BOBA DISTILLATE-INFUSED PRE-ROLL

THC
33.00 - 41.00%
330.00 - 410.00 MG/G

Sourced from quality whole-flower cultivars, infused with our signature distillate and dusted in premium kief, this is not just any squish in a stick. General Admission Honeydew Boba Distillate Infused joints are an extension of our flavourful distillate vape with sweet notes of fruity tapioca and a hint of spice. Honeydew gives you a slice of melon with a potent little punch upon finish.
